

UNIFIED ECOSYSTEM OVERVIEW

Intermaven Network • Master Platform Strategy & Business Architecture

1. High-Level Vision & Ecosystem Strategy

The **Intermaven Network Ecosystem** is a unified, next-generation music-business operational platform and direct-to-consumer marketplace. Rather than forcing creators, record labels, music supervisors, and fans to fragment their workflows across multiple disconnected third-party software tools, our ecosystem combines **AI business tools, direct catalog monetization, sync placement, and consumer streaming** into a single, self-reinforcing network powered by a unified Single Sign-On (SSO) and shared credit engine.

2. The 4 Interconnected Core Platforms

Intermaven

PARENT PLATFORM

intermaven.io

The parent ("Mother") platform housing the core AI Business Suite, Mother-CMS grid, Mother-EPK Builder, and Social AI Studio for automated campaign asset generation and social dispatching.

TuneMavens

MARKETPLACE HUB

tunemavens.com

The primary music business community & marketplace hub. Handles creator distribution elections, record label catalog management, contract negotiations, split cascade ledgers, community Wall of Fame, and CRM target marketing.

TuneStream

STREAMING APP

tunestream.co

The direct-to-consumer lossless audio streaming and discovery platform. Enables fans to stream catalog tracks, tip artists, and build offline music libraries while feeding streaming metrics back into creator analytics.

SyncMavens

SYNC MARKETPLACE

syncmavens.com

The Ditto-inspired sync licensing marketplace connecting independent creators directly with film, TV, gaming, and commercial music supervisors through AI brief matching and a transparent 90/10 split waterfall.

3. Targeted User Personas & Customer Matrix

User Persona	Motivations & Core Needs	Primary Platform Ingress	Key Ecosystem Features
Creators (Artists, Songwriters)	Catalog distribution, contract safety, sync licensing, AI marketing	tunemavens.com / intermaven.io	Split Cascade Engine, AI Recommendation Agent, Mother-EPK
Record Labels & A&R	Roster ingestion, track management, catalog split tracking, payouts	tunemavens.com (Label Console)	Catalogue Roster CSV Ingestion, Advance Recoupment Ledger
Music Supervisors	Cleared audio stems, transparent licensing splits, zero-friction matching	syncmavens.com	AI Sync Match Simulator, Interactive Brief Index
DJs & Engineers	High-bitrate audio pools, studio mastering previews, track stems	djs.tunemavens.com	DJ Pool Engine, Mastering Preview Testbed
Media Houses	Programmatic content acquisition, bulk sync licensing, custom portals	media.tunemavens.com	Media House Routing, Bulk Contract Subsystem
Everyday Listeners / Fans	High-fidelity streaming, artist discovery, direct tipping, offline playback	tunestream.co	Lossless Stream Player, Direct Artist Tipping

4. Unique Market Positioning & Competitive Advantages

1. Closed-Loop Creator-to-Consumer Pipeline

Tracks ingested via **TuneMavens** flow instantly into **SyncMavens** for licensing pitches, **TuneStream** for consumer streaming, and **Intermaven** for AI social marketing—eliminating multi-platform friction and third-party aggregation delays.

2. 90/10 Placement Split & \$0 Catalog Advance Model

Unlike traditional sync publishers that demand ownership rights or charge heavy catalog sign-up fees, **SyncMavens** operates on a **pure 90/10 waterfall model** (90% to creators, 10% facilitation fee). Creators maintain 100% ownership control of their copyrights without predatory catalog buyouts.

3. Mother-CMS & Shared Token Architecture

Intermaven acts as the mother platform driving shared design tokens, multi-tenant UI grids, and localized key overlays across all sub-applications. Updates to the core design system flow seamlessly across all 4 platforms.

4. Native AI Business & Social Studio

Creators gain access to built-in AI tools (Claude Sonnet 4.6 Recommendation Agent, Gemini/Sora Social AI Studio) that generate platform-specific creative assets (1:1 square, 9:16 vertical video) tailored to recommended channel paths.

5. Shared Single Sign-On (SSO) & Unified Credit Bank

Users sign up once and navigate frictionlessly across all 4 platforms. Unified Network Credits can be earned from TuneStream listener tips or marketplace sales and spent on AI runs or CRM marketing campaigns across the entire network.
